SUMMARY

AI Solutions Manager at DoorDash who builds production AI for support operations and teaches organizations to use it: a realtime metrics endpoint, a multi-agent AI support workspace, an outsourced support team working live cases inside it, and AI-adoption training that reached 800+ leaders. Came up through operations and EMT crisis response.

EXPERIENCE

DoorDash – AI Solutions Manager

September 2026 – Present | Remote

- **Lead AI solutions for merchant-integration support:** manage 2 (a builder and a vendor engineer) and own the AI support workspace agents use to diagnose integration cases, including its roadmap, access model and quality work.
- **Took the org's first outsourced support team live inside that workspace:** proved their access layer by layer, built a generated training kit with an automated verifier, ran configuration and training, and coach live cases against a resolution-time target.

DoorDash – Technical Integrations Associate, Engineering & AI

April 2025 – September 2026 | Remote

- **Authored the Go backend for a realtime metrics endpoint** in the company's backend monorepo for a cloud contact center: batched polling, metric gauges and outage alerting. Live in production across ~1,800 agents; a second team's ops tool now consumes it.
- **Built an AI support workspace from prototype into a multi-agent platform:** an LLM copilot grounded by server-side retrieval over the support playbook, on a frontier model through the company AI gateway, with other teams' agents embedded. Access grew nearly 3x; activity rose 5.8x per active day.
- **Shipped two production data apps:** a React + Fastify + Snowflake mapping engine handling hundreds of thousands of merchants, and an 18-page workforce dashboard **validated within 0.9% of the legacy system by an external operations lead.**
- **Ran a payment-processor migration program** that retained **~94% of at-risk monthly merchant revenue under budget:** scoped four ROI-modeled funding options, stood up a 10-agent vendor pod and built the Snowflake dashboard that ran it.
- **Built and ran AI-adoption training reaching 800+ leaders** (~180 live, the rest via curricula I authored) plus an org-wide learning series on building with AI; wrote the org's AI builder playbook.

DoorDash – Disaster Prevention Specialist

November 2023 – April 2025 | Tempe, AZ

- Led cross-functional incident response for merchant-impacting escalations across engineering, operations and vendor teams; built Salesforce and Sheets reporting that surfaced root causes and cut escalation recurrence.

DoorDash – Senior Specialist, Merchant Services

September 2022 – November 2023 | Tempe, AZ

- Scaled an integration-automation tool from 1 to 23 POS providers (tens of thousands of stores), running partner discovery sessions to clear onboarding blockers.

City of Phoenix Fire Department – EMT / Behavioral Health Crisis Response Team Lead

March 2020 – September 2022 | Phoenix, AZ

- Led a 12-person crisis-response team in Level 1 trauma and stroke centers: high-stakes triage, real-time decisions and cross-agency coordination.
-

PROJECTS

Public builder portfolio | github.com/desertcache

- Local-first AI tools: Velvet (Electron + Three.js/GLSL + on-device Whisper STT), Samantha (React 19 + audio-reactive Three.js), AI Radio (Ollama + F5-TTS), and a Claude Code hooks/skills/memory scaffolding template.
-

EDUCATION

Western New Mexico University

Coursework toward B.S., Cell & Molecular Biology

Estrella Mountain Community College

NREMT-B (Emergency Medical Technician)

SKILLS

Languages: TypeScript, JavaScript, Go, Python, SQL

Frontend / Backend: React 18/19, Node, Fastify, GraphQL, REST

AI: LLM copilots, retrieval (RAG), tool calling, MCP, agent integration

Data / Enterprise: Snowflake, Salesforce Omni-Channel, Amazon Connect, enterprise search
